

Handout 1: Employee Request Automation System

Business Scenario

Employees submit requests from a simple Power App.

Request examples:

```
Need leave for 3 days
Laptop is not working
Travel reimbursement pending
Need help with office seating
```

The system should automatically classify the request and route it to the correct department.

Departments

```
HR
IT
Finance
General Support
```

Application Fields

Create a Power App with these fields:

```
Employee Name
Department
Request Description
```

Button:

Power Automate Flow

Flow name:

Employee Request Routing Flow

Trigger:

Power Apps (V2)
