

Handout 10: End-to-End Enterprise Service Desk Automation (Final Capstone)

Objective

Build a complete enterprise-grade solution using:

```
Power Apps
Power Automate
AI Builder Prompt
AI Builder Document Processing
Approvals
Email Notifications
Monitoring
```

This capstone combines all major concepts covered during the training.

Business Scenario

Employees submit requests through a single portal.

Supported request types:

```
HR Requests
IT Requests
Finance Requests
General Requests
Document-Based Requests
```

Examples:

```
Need leave for 5 days

Laptop is not working
```

Travel reimbursement pending

Need access to VPN

Invoice approval request

Prompt Name:

Enterprise Request Classifier

Prompt:

Classify the request into one category:

HR
IT
Finance
General

Rules:

Leave, vacation, attendance, payroll → HR

Laptop, VPN, Outlook, password, software → IT

Invoice, reimbursement, expense, payment → Finance

Everything else → General

Return ONLY one category name.

Input:

RequestDescription

Output:

Category

Step 2: Document Processing

If:

RequestType = Invoice Upload

Use:

AI Builder Document Processing

Extract:

Invoice Number
Vendor Name
Invoice Date
GST Amount
Total Amount

Step 3: Routing Logic

Use:

Switch (Category)

Email:

`hr@company.com`

IT

Email:

`it@company.com`

Finance

Email:

`finance@company.com`

General

Email:

`helpdesk@company.com`

Step 4: Approval Workflow

Condition:

`Category = Finance`

AND

`Amount > 50000`

Action:

Start and Wait for Approval

Approver:

finance.manager@company.com

Step 5: Approval Outcome

Approved

Approved

Send notification.

Rejected

Rejected

Send notification.

Step 6: Employee Notification

Send Email:

EmployeeEmail

Subject:

Service Request Status

Body:

Request ID:
REQ-1001

Category:
[Category]

Status:
Submitted / Approved / Rejected

Department:
[Assigned Team]

Step 7: Request Tracking

Store requests in:

Excel
OR
SharePoint
OR
Dataverse

Columns:

Request ID
Employee Name
Category
Status
Created Date
Assigned Team

Monitoring

Participants must demonstrate:

Run History
Success Runs
Failed Runs
Inputs
Outputs
Approval Status

Test Cases

Test Case 1

Need leave for 3 days

Expected:

HR

Test Case 2

VPN is not connecting

Expected:

IT

Test Case 3

Need reimbursement for hotel stay

Expected:

Finance

Test Case 4

Upload:

Invoice.pdf

Expected:

Document Processing

Field Extraction

Finance Approval

Bonus Features

Participants may implement:

Ticket Number Generation

REQ-2026-1001

Priority Classification

Low

Medium

High

Critical

Teams Notification
