

Handout 4: IT Incident Management System

Business Scenario

Employees raise IT incidents through an app. The system should classify the issue and route it to the correct IT support group.

Example Incidents

```
VPN is not connecting
Laptop screen is broken
Outlook is not opening
Password reset required
Need software installation
```

Categories

```
Hardware
Software
Access
Network
General
```

Process Flow

```
Employee
  ↓
Power App

AI Prompt

Classify the IT incident into one category:

Hardware
Software
Access
Network
General

Rules:

- Laptop, monitor, keyboard, mouse, screen → Hardware
- Outlook, Teams, application, software installation → Software
- Password, login, account locked, permission → Access
- VPN, internet, Wi-Fi, network → Network
- Anything else → General

Return only the category name.
