

Lab: Custom Document Processing Using AI Builder

Objective

Train a custom AI Builder model to extract employee information from PDF documents and use the trained model in a Power Automate flow.

Step 1: Create a Document Processing Model

1. Open Power Automate.
 2. Navigate to AI Hub.
 3. Select AI Models.
 4. Click Documents.
 5. Select Document Processing.
 6. Click Create.
-

Step 2: Select Document Type

Choose:

Fixed Template Documents

Click Next.

Step 3: Define Fields to Extract

Create the following fields:

Field Name	Field Type
EmployeeName	Text
EmployeeID	Text
Department	Text
Salary	Number

Field Name	Field Type
JoiningDate	Date

Click Next.

Step 4: Upload Sample Documents

1. Click New Collection.
2. Upload 5 sample employee documents.
3. Ensure all documents follow the same layout and structure.

Example:

Employee Name : Rahul Sharma

Employee ID : EMP001

Department : IT

Salary : 75000

Joining Date : 01-Jan-2023

Click Next.

Step 5: Tag Documents

For every uploaded document:

EmployeeName

Highlight:

Rahul Sharma

Assign:

EmployeeName

EmployeeID

Highlight:

EMP001

Assign:

EmployeeID

Department

Highlight:

IT

Assign:

Department

Salary

Highlight:

75000

Assign:

Salary

JoiningDate

Highlight:

01-Jan-2023

Assign:

JoiningDate

Repeat the tagging process for all uploaded documents.

Verify that all fields display a green check mark.

Click Next.

Step 6: Train the Model

Review the model summary.

Verify:

- EmployeeName – 5 examples
- EmployeeID – 5 examples
- Department – 5 examples
- Salary – 5 examples
- JoiningDate – 5 examples

Click Train.

Wait for training to complete.

Step 7: Publish the Model

After training completes:

Click Publish.

The model is now available inside Power Automate flows.

Step 8: Create a Power Automate Flow

Create an Instant Cloud Flow.

Trigger:

Manually Trigger a Flow

Step 9: Add File Input

Add action:

Get File Content

Provide the PDF document to be processed.

Step 10: Add Predict Action

Add action:

Predict

Configure:

Model: Your Published Document Processing Model

Document Type: pdf

Document: File Content from Get File Content

Step 11: Add Compose Action

Add a Compose action.

Insert the following text:

Employee Extraction Result

Employee Name: [EmployeeName text]

Employee ID: [EmployeeID text]

Department: [Department text]

Salary: [Salary value]

Joining Date: [JoiningDate text]

Select these values from Dynamic Content:

- EmployeeName text
 - EmployeeID text
 - Department text
 - Salary value
 - JoiningDate text
-

Step 12: Test the Flow

Run the flow using a sample employee PDF.

Expected Output:

Employee Extraction Result

Employee Name: Ahmed Khan

Employee ID: EMP010

Department: Finance

Salary: 95000

Joining Date: 12-Jun-2024

Solution Architecture

Manually Trigger a Flow

Get File Content

Predict (AI Builder Custom Document Processing Model)

Compose

Display Extracted Employee Information

Extracted Fields

The model extracts:

- Employee Name
- Employee ID
- Department
- Salary
- Joining Date

from structured employee PDF documents automatically.
